Join Community Living Essex County at one of the two open houses to learn more about Smart Support Technology Enabled Services and the potential of the project.

Speakers will be here from The Charles Lea Center, South Carolina and SimplyHome, North Carolina to share success stories with us.

About the Project

Smart Support Technology Enabled Services is a project that we have launched which involves implementing technology to enhance opportunities for people we support to reach their goals.

This initiative plans to use technology to compliment our current supports and thus offer modern individualized supports within a sustainable and innovative infrastructure.

Examples of Smart Support Technology Enabled Services include:

· **Smartphones** – to enable regular check-ins with the person's support network via text, audio and video calling

· **Tablets/handheld devices** – to implement visual schedules, task modelling, and daily reminders

· **Medication dispensers** – to give people more independence with medication administration

Technology implementation has shown to be quite successful in other areas throughout North America and Smart Support has the potential to be a demonstration project for other service providers within Ontario's Developmental Services Sector.
