

# Pandemic Emergency Management – Challenge & Tested Solution

---

## Challenge:

PPE supply chain issues

## Solution:

Triage the PPE supplies per individual sites, including test kits

## Steps to Implement:

1. Prioritizing sites
2. Instead of large amounts on every site, consolidate and prioritize
  - When RATs were short supply, we brought them all to a centralized site.
  - We've created a mini-protocol to triage according to prioritization
    - Supervisors touch base/check-in to advocate for supplies as needed

## Results

1. How effective was this?
  - It has been effective as a temporary solution
2. Was this efficient? Was it quick to implement?
  - Yes.
3. Would you recommend this to other agencies?
  - As a temporary challenge

## Additional Considerations:

N/A

## Lessons learned:

Monitor supplies per location and develop methodology to ensure consistency of stock across locations
